

Implementation K1

CrossRef DOI

Use Case 1: GEOMAR

Status

ORCID identifiers for persons are already captured at GEOMAR, but not yet in a fully systematic way. Capture is currently **manual**, primarily within the publication repository **OceanRep**

- The system used is **EPrints** (with ORCID support)
- **Responsibility:**
 - Capturing: Library
 - Maintenance: Individual researchers
- There are currently **no documented workflows or institutional guidelines** for ORCID usage
- A key challenge is the **lack of system integration** across central infrastructure
- In particular, ORCID information is not yet consistently propagated from:
 - **SAP → Active Directory (AD) → OSIS applications → OceanRep**
- Improving this integration is an important step toward a more **automated and harmonized ORCID implementation**

Outlook

We strive to work with the library, administration IT, software development and personnel department to develop proper workflows to capture and store ORCID within GEOMAR data systems.

Use Case 2: Geoforschungszentrum Potsdam (GFZ)

What is the current status?

Where shall we go?

Use Case 3: Helmholtzzentrum für Umweltforschung (UFZ)
